The American Press and the Pulitzer Prize will be the topic of a speech to be delivered at a TRICON election dinner, Dec. 2, by Professor John Hohenberg of the Columbia University Graduate School of Journalism. Mr. Hohenberg, author of the journalism textbook, "The Professional Journalist," and editor of the anthology, "The Pulitzer Prize Story," has been Secreta-
ry to the advisory board on the Pulitzer Prize since 1954. After graduating from the University of Washington, Mr. Hohenberg was graduated from the Columbia Journal-
ism School in 1957 and became a Pulitzer Traveling Scholar in Europe. He began his active newspaper career with the SEATTLE
STAR in 1943 and worked briefly on the NEW YORK WORLD while at Columbia.

In 1927-28, Mr. Hohenberg served as United Press correspondent and special correspondent for Eng-
lish and American newspapers in Europe. He has been assistant city editor of the NEW YORK EVEN-
ing POST in 1948, and from 1933 to 1936 he was a political writer and military affairs editor of the NEW YORK JOURNAL - AMERICAN before joining the NEW YORK POST as U.N. and Wash-
ington correspondent.

During the war, Mr. Hohenberg has been a consultant to the Carnegie Endowment for International Peace, and to the United States Air Force, and has lectured at the Air War
College, the Army Information School and a number of Japanese and Indian universities.

In 1963, on a sabbatical leave from Columbia, he lectured in seven Far Eastern countries as an American specialist for the State Department. The next year he served as a research fellow in the Council on Foreign Relations studying the flow of news between Asia and the United States.

The speech, to be given after dinner in Hamlin Hall, will be open to the public at 5 p.m.

The importance of the recovery of the doctrine of the resurrection by the Church was the theme of the first of three lectures on the subject "The Realistic Historian and Our Faith" given by the Very Rev. George F. MacLeod of the Ilia Community, Brooklyn, Wednesday night in McCook Auditor-
mum.

Dr. MacLeod told the doctrine had to be recovered and understood in the context that St. Paul looked at it, that is, in the Hebrew view of the unity of body and soul. Just as expressed in the Hebrew word life, which means both wind or breath and also ever-
be continued, "the resurrection occurred in terms of body and spirit and this only in the re-

Dr. MacLeod referred to the "fraternity" of various distinc-
tions among modern men such as science, sociology, psy-
choanalysis and art." The "fraternity" lies in "the con-
cern for the physical, the body of Christ as it might be, and the spiritual aspect, as the end of
Christ, being overlooked," he added.

Dr. George H. MacLeod, the second in his lectures on "The Substantial Humanism and Our Faith," commented that "sacrifice means making whole, and not desecration."

He noted that gamblers have the greatest gift and lavers the greates-
test gift of all. These persons should not be "tailed," for they have the most potential, but their faith and love must be recons-
ructed," he said.

Fifteen percent of today's so-
ciety are convinced of their faith, another 15 percent are fermen-
ting. The remaining 70 per cent, he continued, "are luminous," he declared. St. George H. MacLeod characterized the fireman of the age, the man who are too apathetic to be reached.

The mind and the people one factor "we must bring the problems in, not send the ideas out," Dr. MacLeod stated.

This doctrine, he observed, ap-
proved the situation with a con-
sciousness of the unity of body and spirit acting together and making the weaknesses of man ap-
proach the true problem of a
fraternity society.

If you see one movie this year, see THE PAWNBROKER. See It for Acting, Editing, Power for Ralph Rosenblum’s film editing. But see It. See It for Sidney Lumet’s Island, Tessie, his deceased best camp,.. With the profits from his Sept. 29, he appears embittered, resentful, disdainful, and most of all, uncaring and brittle. The only emotions that he can sense are pain and fear. It is the 25th anniversary of his wife’s death. The film, through associations in Nazerman’s mind and subsequent flashbacks, exploits three levels of Nazerman’s existence: the idyllic days with his wife and two children (present in the film’s opening slow-motion sequence), the horrors of the German war camp that he has tried unsuccessfully to forget, and his emptiness, death-like life as a pawnbroker.

As these three planes are slowly revealed, each scene more fully explicates the tight-lower-relationship between the three and demonstrates the intriguing character of Sol Nazerman.

A series of events following Sept. 29 force Nazerman to make associations that for years he has blocked out of his conscious. Complete flashbacks to the war camp experiences, the dog snarling at a refugee’s feet, his wife in bed with a Nazi officer overwhelm Nazerman with their impact.

The power of these associations is realized through relationships with Jesus Ortiz, his shop-helper, with Rodriguez, Harlen’s big voice, and with Ortiz’s girlfriend and culprits in Nazerman’s masochistic flouting of his hand on his paper spike.

THE PAWNBROKER is an example of the motion picture media used as a legitimate art form because of the combined efforts of actor, director and film editor. Rod Steiger is powerful, stunning brilliance. The range of his performance is commanding his hand at once immobile, then fluid, his voice uncontroling, then emotionally

Sidney Lumet and Ralph Steenborn through fine photography work and slick film edition have created a movie experience that builds, unifies, and unrelates with amazing power. THE PAWNBROKER is one of the best pictures of 1962. --- NODA/TCH

Austin to Host Kohon Quartet

On Tuesday at 8:15 p.m., Austin Arts Center will host the Kohon Quartet, winner, among other awards, of the Grand Prix de Découverte, Their selections will include Arnold Schoenberg’s Quartet in One Movement, open, the “Improvisation,” K. 465, by Mozart, and the First Connecticut performance of Constant Lambert’s Second String Quartet.

The Kohon Quartet, which is now in residence at New York University, is made up of the first- and second-string quartets of the Boston Festival Orchestra. Harold Kohon, well-known concert violinist, is former concertmaster for Leopold Stokowski.

John Alves as Miriamne’s father and Dick Hoffman as Judge Gaunt proved too small for the settings and situations of ages old. Alves heightens his performance with small physical movements such as a hand holding a nervous victim to bring out the role. Hoffman used a strained voice suggestive of past events about the menacing, moving and fading dignity of the trial in question.

Some Parks as Track Estrella full perfectly the public image of the gangster type. Perkin as Solomon Roemer as the cowardly Garth gave the audience the appropriate unfeeling sobriety. Eve Lindo proved the evening’s comic relief as the half-witted book, utilizing a grunting voice for its laughable effect, while Dick Cody as Shadow electrified the audience with his laugh attack.

George Nichols, III, family advisor to the Jesters, directed and gave much, although not always strong, movement to the drama. The management of the hurdy-gurdy scene was particularly well-done. The pacing of the entrances of much of the first act was too slow and added time to a production already too long. In all, WINTERSTEIN proved as artistic success for the Jesters. With the quality of this production as a guide, we can look forward to the March presentation of John Dos Passos’ U.S.A. and to the spring, hopefully to another musical play.

The crowd scene brought a breath of color and movement to the stage, relieving the monotony of the end-set street setting. Jeffy Paloe’s active characterization of Benny, the apple-seller, highlighted the action with her shrill voice.

TROCK ESTRELLA confronts the only witness to a gangland slaying in the second act of the Jester production of WINTERSTEIN. From left, Dick Cody (Shadow), Steve Parks (Track), Walter Roemer (Garth), and John Alves (Edross).

‘Most Enjoyable Evening’

Wintersett Script Main Weakness

At a meeting of the Goodwin Fellows Wednesday, the members voted to have Chairman John Wolfchek ’64 write a letter to the administration outlining their plans to increase the number of hours during which the Arts Center would be open.

As stated the plan called for the fellows to staff the center from 5 to 7 p.m. and 10 to 12 p.m. on weekdays on a voluntary basis, and for the College to pay to keep the center open Saturdays and for the College to pay for added hours.

Mr. Melody (Clark Denlow) invites you to come and see our large selection of musical instruments, accessories, sheet music, and CDs.

Mr. Melody (Clark Denlow) invites you to come and see our large selection of musical instruments, accessories, sheet music, and CDs.
Wire-Rimmed 'Cheaters' Capture Student Fancy

by Henry Weidner

Will the wire-rimmed eyeglasses soon sweep the Trinity campus? Already a handful of Trinity men can be seen sporting such spectacles. Daily more and more students are being added to the ranks of the wire-rimmed wearers.

Where will it all end? Will Trinity soon be inhabited by 1100 Wally Coxes?

So far some 10 or 15 students have been caught up in the rage. While one student bought his pair only because he finds them more suitable for playing lacrosse, most wire-rimmed wearers made their purchases because they liked the style of the glasses.

A senior explained his recent purchase of a pair by stating he wanted "the most conservative style of glasses available on the face of the earth." A sophomore admitted that he bought his "to be different."

He added, though, that he would have to get rid of the pair because wearing the glasses is already becoming too much of a fad.

Although wearing the glasses is something of a fad, this is not to suggest that wire-rimmed glasses are not functional. These glasses are comfortable because of their light weight. Also their large lenses provide wearers with a wider field of vision.

It seems as though the fad of wearing these glasses had its origin in England. There a young maiden was pictured sporting a pair of the cheaters on the cover of a prominent magazine. Her spectacles captured the fancy of many Britishers that they hastened to neighborhood opticians to purchase a set for themselves.

Soon the rage made its way to the United States where presently it is flourishing in many areas. Greenwich Village in Manhattan particularly abounds with the glasses. There are reports the specs are also thriving at such places as Harvard and Yale.

Hartford opticians acknowledge the fad is not as yet very big in this area. One, in fact, had no knowledge of the fad at all. Another noted that he sold only two or three pairs of these glasses. One of these, he added, was to a Trinity student.

This particular gentleman stated that as far as he's concerned the wire-rimmed glasses "should have stayed in England." He said he feels the glasses are definitely not stylish.

Only time will tell whether wire-rimmed glasses will totally capture the fancy of the Trinity student body. No matter the outcome, it seems certain that eventually the wire-rimmed eyeglasses will go the way of the hula-hoop, the Edsel and Barry Goldwater.
Raymond C. Parrott '55 will represent the Peace Corps here Dec. 2 and 3. He is the director of the Peace Corps Division of National Voluntary Service Programs.

According to John F. Butler, director of placement, Mr. Parrott will be available for discussion with students in the Cape lounge. Mr. Butler suggests that juniors especially may be interested in speaking with him, because the Peace Corps is planning a 6-10 week training program this summer for college juniors.

An economic major at Trinity, Mr. Parrott was Phi Beta Kappa, a member of the Modena, president of his class and a member of the swimming team. Received his B.A., from the Fletcher School of Foreign Law and Diplomacy, where he was a Clayton Fellow. From 1955-1959 he was a member of the Ford Foundation.

In 1961 he was assigned as deputy Peace Corps representative to Ghana and later served as acting director for the Peace Corps in Nigeria.

In Better Position to Go Forward

Mangone Says Setbacks Place U.N. In Better Position to Go Forward

Setbacks suffered by the United Nations have actually put it in a position to "spring forward," Dr. Mangone, professor of political science and international law, said last Wednesday.

In 1945, he said, the United States tried to shift more responsibility for keeping the peace and envisaged the United States as compared with 88 pints this year, 252 pints have been pledged this year, as compared with 88 pints as compared with 88 pints last year. This year's campaign consisted of pledges of about 260 pints of blood, which was slightly above the quota.

In 1945, it was noticed that the powers work together for Red Cross and the Ford Foundation and to the Carnegie Endowment for International Peace. The "balance of terror" is in answer, Dr. George, said, the only answer to the present-day situation. He said, in his discussion in the College Chapel last Thursday evening, that only the Christian Church is in a position to prevent total war and to create a peaceful world.

Sir George regarded the world that is geared to war, that huge Armada that is created, the expectation of war. "Money is always available for the arms that are needed, but the other side is weary too," he said.

Dr. Mangone viewed three stages in the changing concept of power. In the first stage, he said, little attention was paid to poverty at first, but in 10 years the U.N. "has marched right into the jungle of economic development." He conceded, however, that metal policies and realistic economic thinking made the "real nations do not provide the poor manner." Increased aid must be tied to an improved trade plan so that the poorer countries can export their wares. There has been an ever deeper a dropping off of its exports in the past 15 years. The fraction of exports by these countries, he said, was one-third in 1950 to one-fourth in 1955 and to little more than 15% today, he added.

Sir George pointed out that the real economic progress depends on the "wisdom, the courage, and the capacity of the underdeveloped countries, themselves." In 1945, he said, the Economic and Social Council was formed as a basic arm of the U.N., but was so slow with so little power. A 1950 threat to raise economic productivity of member nations witnessed expanded member-to-member economic cooperation, but was still limited by lack of funds. Later lending organizations have still not been successful in raising significant funds, but Dr. Mangone said more action is needed in more immediate future. This aid must be not only through the U.N. but by the member nations too on their own. Another aspect of peace, he said, is the "peaceful world." This involves both peace at home and peace in foreign countries.

In his last lecture at the College, Dr. Mangone said, "We must be punished so that we can turn our aims into planning, for our eternal welfare." "Jesus' way is considered by many today as a way to salvation. This non-violence of the Church and the breaking of the cross over Viet Nam will become a factor in the way of the Cross.""We want the kind of master that punishes," said Dr. MacLeod, "for we must be punished so that we may learn from our own mistakes, more than from the mistakes of others." "If you kick God in the teeth, He will show you where you stumbled last year." This kind of God is not what man wants, he said.

"It is the kind of master who punishes," said Dr. MacLeod, "that we must learn to respect, that we must learn to fear, that we must learn to love. "You must learn to respect the power of God, the power of the Christ."

The "balance of terror" is no answer, Sir George noted. The only answer to the present-day situation is a "world of peace and friendship." Dr. MacLeod said that this is what the United Nations is for. The "balance of terror" is the way of the Cross. "My sole concern is whether you've been punished," Dr. MacLeod urged. "We want the kind of master that punishes," said Dr. MacLeod, "so that we can learn to work together for peace, and not for war."

In concluding, Dr. MacLeod told the audience that "the only answer to the present-day situation is a world of peace and friendship." Sir George continued.

"We want the kind of master that punishes," said Dr. MacLeod, "so that we may learn from our own mistakes, more than from the mistakes of others." "If you kick God in the teeth, He will show you where you stumbled last year." This kind of God is not what man wants, he said.

"It is the kind of master who punishes," said Dr. MacLeod, "that we must learn to respect, that we must learn to fear, that we must learn to love. "You must learn to respect the power of God, the power of the Christ."

The "balance of terror" is no answer, Sir George noted. The only answer to the present-day situation is a "world of peace and friendship." Dr. MacLeod said that this is what the United Nations is for. The "balance of terror" is the way of the Cross. "My sole concern is whether you've been punished," Dr. MacLeod urged. "We want the kind of master that punishes," said Dr. MacLeod, "so that we can learn to work together for peace, and not for war."
Profile of the Freshman

Supplement

Nov. 23, 1965
PROFILE OF THE FRESHMAN

136 of 333 in Class of 1969 Responding

(App All Figures in Percentages unless Otherwise Indicated)

PERSONAL PROFILE:    Age 18 years, 5 months    Weight 156 pounds    Height 5 feet, 11 inches

FAMILY:    Number of brothers .911    Sisters .363

ORIGINATION:    Suburban 57.66    Rural 28.98    City 13.36

REGION:    Middle Atlantic 33.6    Connecticut 24.9    West 20.3    Other New England 15.5    Foreign 1.9

DATING:    Out of Hartford 39.70    In Hartford 36.76    Both 13.24    No Answer 6.89    Neither 4.41

RELIGIOUS PROFILE:    Protestant 66.46    Jewish 14.91    Catholic 10.68    None 6.67    Greek Orthodox 1.48

RELIGIOUS ACTIVITY:    Practicing 66.67    No Answer 30.24    Non-Practicing 2.96

POLITICAL PROFILE:    Independent 44.12    Republican 33.69    Democrat 16.17    No Answer 5.88    Conservative .74

SECONDARY PREPARATION:    Public 57.3    Private 42.7

APPLYING TO TRINITY:    First Choice 41.17    Second 33.62    Third 18.38    Other 6.63

CLASS PROFILE:    Scholarship Aid 31.23    Number Accepted ca. 600    Number Applying 1836

SATISFACTION WITH TRINITY:    Positive 81.62    Negative 13.24    Neither 5.14

WHERE ACCEPTED:    Co-educational 36.47    Men's 28.83    Trinity Only 22.78    Coordinate 14.70

TYPE OF MEN'S COLLEGE:    Ivy League 12.94    Little Three 3.53    Service Academy 1.18

**Coordinate" refers to one of two colleges under a single administration, e.g. Columbia, which is associated with Barnard.

Freshmen Fathom Freedoms, Follies

"So far I like the place. Everyone is friendly, and aside from the work, life is fun up here. You hear about the freedom of colleges and it really does exist: you are smart enough to be able to take advantage of it. I don't know if you want to know an upperclassman who will take you around from Hartford.

"The food is cool, but the atmosphere (in the dining hall) stinks. Trinity seemed ideal because of the informal atmosphere and the smallness of the student body, which allows people in shine who would be buried in a larger institution.

"When I first walked into my room it looked like something out of "On the Beach." But they can be improved and can be lived in.

"I was very disappointed to find the number of courses required for all majors. I think if I had fully realized how many there were, I might not have applied here.

"I chose Trinity because they needed me."

"The Matriculation Ceremony really sets a lot of the College. There was something about the color of the ceremony that somehow made it seem right.

"They don't work us hard enough on the football team. Nobody, coaches and players alike, seems to give a damn."

"I hate bells. The math courses here are not just hard, they're ridiculous. To expect someone with so little math background as you get in high school to do well, we also pass that course and get anything out of it, it's crazy.

"The arts center is beautiful, but whenever I try to get in to practice (the piano) it's closed.

"North Campus has a number of disadvantages, but its short halls are good for getting to know other freshman and upperclassmen, as well as for the nightly hall-halls parties.

"I hate to think how much money the sandwich man is making, but I can't ever resist the urge to buy something. It must be the magnification of his call.

"I Was Very Impressed"

J.A.s: Frosh Change

-- Having advisors in such close proximity offers a perfect opportunity to get together to talk over problems or just to get to know each other.

-- Of course there are always those who are more independent than others, and inevitably we don't see as much of them as others, but so rooming arrangement could change this, and it is not necessarily bad anyway.

-- Now and then having an entire entry living in our room becomes somewhat annoying, but in general the freshmen are great.

-- When they (the freshmen) come almost on the kook'.

-- The campus seems to be the place that it seems as if we are running a talent scout agency, but it certainly is fascinating; they are teaching me far more than I could ever hope to show them.

-- One of the complaints about Amherst is that it consists of a lot of ivory tower intellectuals. From what I have seen here, Trinity, with the class of '69, seems to have drawn quite a good balance of the intellectual and social aspects. We will not soon be labeled like Amherst if this is a typical class.

-- We seem to have only two problems. First is the telephone, mine and my roommates' or does it belong to our advisees? If it is ours it is somewhat annoying, but in general the freshmen are great.

-- The primary fault with the freshmen is that they and their friends have a certain social immaturity and foolishness. They are fine as intellectuals, but they seem to lack something as members of a community.

-- Living far away from most of my advisors, i.e. in South Campus B, I had little chance to get to know most of them, but I was very impressed with the way they seemed to accept a rather uncomfortable and unsure beginning of a college career.

-- North Campus, to the surprise of most, has actually proved to be a very successful atmosphere for freshmen. As someone in the administration put it, these dorms belong to our advisees, i.e. in South Campus B I had little chance to get to know most of them, but I was very impressed with the way they seemed to accept a rather uncomfortable and unsure beginning of a college career.

-- The math courses here are not just hard, they're ridiculous. To expect someone with so little math background as you get in high school to do well, we also pass that course and get anything out of it, it's crazy.

-- The arts center is beautiful, but whenever I try to get in to practice (the piano) it's closed.

-- North Campus has a number of disadvantages, but its short halls are good for getting to know other freshman and upperclassmen, as well as for the nightly hall-halls parties.

-- I hate to think how much money the sandwich man is making, but I can't ever resist the urge to buy something. It must be the magnification of his call.
Room Innovations Bring Closer, More Constant J.A. - Frosh Contact

During the spring term of last year, rooming changes were worked out for the class of '69 by Roy Heath, dean of students, to establish closer contact between freshmen and the rest of the student body as a whole, and with the junior advisers specifically.

The dean said that basically the College was divided into almost perfect units for a round J.A. - freshman relationship, but this physical advantage had never been utilized to the fullest.

For the first time, he said, an effort was made to bring freshmen into more direct and constant contact with their advisers by having them live in closer proximity to each other than in past years. For this reason freshmen were placed in North Campus with J.A.'s in each of the six divisions of the dorm working with eight freshmen.

In Jarvis, instead of having four advisers in every third entry, one has been placed with non-J.A.'s in each entry. It is thus theoretically impossible for advisers and advisees not to see each other several times a day.

Throughout the rest of the school, the dean has tried to limit the number of advisers per J.A. to between eight and ten for maximum efficiency on both sides.

During last year, Dean Heath said, he felt a number of particularly talented freshmen had been buried in groups in which their talents were not allowed to shine. He then decided that this year he would create two clusters of the most "interesting" men and place them with equally talented advisers.

Of course, he assured, finding such interesting people could be done on paper only, and only one of the two clusters had the desirably high degree of inter-personal intellectual relationships firmly established.

Viewing the class of '69 as a whole, Dean Heath noted a tremendous "trend toward greater intellectual awareness in the College."

"Of course," he assured, finding such interesting persons could be done on paper only, and only one of the two clusters had the desirably high degree of inter-personal intellectual relationships firmly established.

Finally the dean said that during the rest of the year he hoped to be able to work up to a quarter of the class in his house for dinner in an attempt to get to know them better as individuals.

J.A.'s, Advisers Agree North Campus Structure Fosters Ideal Relationships

These freshmen living for the first time in North Campus dormitory are apparently satisfied with their accommodations.

Dr. Roy Heath, dean of students, has expressed particular satisfaction with the Junior Adviser-advisee relationships which have developed in North Campus.

Since North Campus is divided into three sections, each with two floors, there are six Junior Adviser units. Each Junior Adviser unit has eight freshmen.

Philip C. Oakley, a North Campus J.A., agrees with Dean Heath that the physical plant of the dormitory is perfectly adapted to J.A. - freshmen unity. He feels his advisers are "tightly knit group, probably because of the physical unity.

Oakley also commented that, the proximity of fraternity houses to the dormitory has had little or no effect on the freshmen.

Other Junior Advisers in this dormitory agreed with Oakley, feeling that North Campus is ideal a desirable place in which to house a number of freshman.

William Hough, a freshman living in North Campus, said the presence of terraces was particularly helpful in meeting people. "There are a lot of people around," he said.

He pointed out that Jarvis residents don't have the advantage of this "terracing" system in another dorm, Aram Abraham, another freshman resident, said that having a group of freshmen together was good. He was pleased that the dormitory was not too noisy to work.

He wanted to create a more harmonious grouping there, and the possibility of when freshmen move to other dormitories, he felt, would aid in making this mixed environment.

Editorial

Year of Fear?

For most students, the freshman year is the most agonizing time in a college career. It is a year where anxieties about collegiate expectations are either nurtured and flourished, or they die. It is a year in which success is terribly important to the student and family.

The problems facing today's freshmen are either so great, so deep-rooted or so numerous that not even the best of the nation's more than 6,000 accredited colleges can hope to cure all of them. But they can try.

And Trinity is obviously trying. For example, a questionably efficient Freshman-Sophomore Advisory Council, a Junior Adviser system, a new curriculum calling to rouse class yearly and other more informal aids have all been created. Yet the freshman class still appears the most frustrated and still shows the lowest level of achievement of all classes.

There is good reason. The freshman course schedule is harder than that of juniors or seniors, and more and more Freshmen who are taking advanced courses are receiving bunched up courses meant for upperclassmen.

One suggestion in today's supplement is well worth serious consideration. Dr. George E. Higgins, College counselor, has raised the possibility that freshmen take only four courses, making up the dropped course junior year. At a time when most courses taken are required and study habits are being formed, a reduced schedule can be as beneficial as it would be welcome.

R. Higgins' argument is that not being able to attain their goals because of sheer workload, freshmen set their sights lower, many never enjoying the feeling that North Campus is unique and for learning. Dr. Higgins is very lucky right.

In any case, the freshman should be studied, not just this year or next year, but every year, for every year the freshman changes.
Dr. George C. Higgins, College counselor and assistant professor of psychology, has said that too many freshmen arrive on campus looking for an "academic success experience," but because the first year is too quantitatively hard, many never find it. They discover, he said, that it is all they can do to get by, and must come to the conclusion that a low achievement level is normal.

To alleviate this problem, Dr. Higgins suggested that formal changes be made in the curriculum. First, he supported the idea of having four course years for senior and junior years and five in the other two. He also suggested that the quantity of work and allow freshmen more of an opportunity to absorb more of their studies and, consequently, to do better. Beyond this proposal Dr. Higgins suggested that the first wave of courses for the three-year bachelor's degree be made easier so that fewer students will be overburdened with work before they realize it.

He also noted that the creation of a freshman dean of students might possibly be used to lighten the load of the present dean. Freshman year was planned to be the time for students to learn useful academic and personal skills, he added, and such a dean would be very helpful in keeping an eye on each member of the class and in helping to guide each to the absorption of these skills.

The present Freshman-Sophomore Advisory Council is an attempt to meet this need, but, Dr. Higgins continued, few of the approximately 45 to 45 faculty members of the council have enough time to devote to their advisees. The counselor went on to say that although there was so much as the ideal curriculum, the college must continue striving to improve the courses and methods. One question which he thought worth examination was the possibility of a special freshman course of study. He suggested such a special curriculum might be oriented to inter-departmental coordination in the physical sciences, the social sciences and the humanities.

At a recent meeting of the Faculty Curriculum Committee, a sub-committee to be headed by Dr. Charles Miller, associate professor of physics, was formed to deal with long-range curriculum plans, ideas and possible changes.

So far, according to Dr. Miller, the committee has not been completely formed, and it has held no meetings. But he described its proposed function as looking closely into the college curriculum and those of other colleges with the idea in mind that the only way to move toward any form of perfection was through constant re-examination and change.

Some of the suggestions that have been received by the committee range from practical altering of the summer or kind of required courses, to revising the grading system, to changing the basic structure of freshman year.

Dr. Miller hopes that this committee, although not formed to make any specific changes in the given area, will meet regularly and work to gather a significant body of information which might be a value in making any future changes.

F.E.C. OFFICERS

At a recent meeting of the Freshman Executive Council, under the temporary chairmanship of last year's president, George L. Crites III, the following officers were elected: Lloyd J. Kramer, president; Jay Berns, vice-president; and Robert J. Taylor, secretary-treasurer.

Success Search

Drop A Course?

Dr. George C. Higgins, College counselor and assistant professor of psychology, has said that too many freshmen arrive on campus looking for an "academic success experience," but because the first year is too quantitatively hard, many never find it. They discover, he said, that it is all they can do to get by, and must come to the conclusion that a low achievement level is normal.

To alleviate this problem, Dr. Higgins suggested a number of concrete changes in curriculum policy. First, he supported the idea of having four course years for senior and junior years and five in the other two. He also suggested that the quantity of work and allow freshmen more of an opportunity to absorb more of their studies and, consequently, to do better. Beyond this proposal Dr. Higgins suggested that the first wave of courses for the three-year bachelor's degree be made easier so that fewer students will be overburdened with work before they realize it.

He also noted that the creation of a freshman dean of students might possibly be used to lighten the load of the present dean. Freshman year was planned to be the time for students to learn useful academic and personal skills, he added, and such a dean would be very helpful in keeping an eye on each member of the class and in helping to guide each to the absorption of these skills.

The present Freshman-Sophomore Advisory Council is an attempt to meet this need, but, Dr. Higgins continued, few of the approximately 45 to 45 faculty members of the council have enough time to devote to their advisees. The counselor went on to say that although there was so much as the ideal curriculum, the college must continue striving to improve the courses and methods. One question which he thought worth examination was the possibility of a special freshman course of study. He suggested such a special curriculum might be oriented to inter-departmental coordination in the physical sciences, the social sciences and the humanities.

At a recent meeting of the Faculty Curriculum Committee, a sub-committee to be headed by Dr. Charles Miller, associate professor of physics, was formed to deal with long-range curriculum plans, ideas and possible changes.

So far, according to Dr. Miller, the committee has not been completely formed, and it has held no meetings. But he described its proposed function as looking closely into the college curriculum and those of other colleges with the idea in mind that the only way to move toward any form of perfection was through constant re-examination and change.

Some of the suggestions that have been received by the committee range from practical altering of the summer or kind of required courses, to revising the grading system, to changing the basic structure of freshman year.

Dr. Miller hopes that this committee, although not formed to make any specific changes in the given area, will meet regularly and work to gather a significant body of information which might be a value in making any future changes.

F.E.C. OFFICERS

At a recent meeting of the Freshman Executive Council, under the temporary chairmanship of last year's president, George L. Crites III, the following officers were elected: Lloyd J. Kramer, president; Jay Berns, vice-president; and Robert J. Taylor, secretary-treasurer.

Smith Ties Curriculum Revisions To Admission/Transition Problem

From the point of view of this curriculum, he said, the present freshman class is remarkable from social, economic and cultural points of view.

Because of this, Dean Smith stressed, any curriculum changes would have to be closely coordinated with admissions policy. Asked about proposals to reduce the number of courses taken by freshmen, he went on to say that perhaps the college should instead take into consideration that most students are used to the secondary school environment of nearly constant testing. Consequently, he suggested, the college can help ease the student into the college atmosphere by greatly increasing the amount of testing and graded homework assignments. In the first few weeks, gradually easing off to avoid the shock of suddenly putting a student on his own. He said one reason this change is needed is that often a student has no idea of the level of faculty expectation, and without being forced to work, he will merely "float euphorically" along until the first series of tests.

Another problem the registrar sees is that as some secondary schools increasingly prepare students for advanced placement, colleges finding themselves having as high quality preparatory schools for advanced placement, colleges finding themselves having as high quality preparatory schools, are not able to handle college courses geared increasingly towards advanced placement level.

To a large university, he went on, this problem will not be as great as to smaller institutions. Graduate students can often be used to teach remedial courses to those ill-prepared for college work without greatly increasing the cost to the university, he said.

On the other hand, for a college like Trinity to maintain the broad cultural, economic and social base, such remedial courses would not only be necessary, but would take a substantial proportion of the college budget.

This is not an immediate problem, he emphasized, but it is only one of many problems which need constant examination and which must have as high priority as possible.

He noted, regarding long range curriculum study, that a sub-committee of the Faculty Curriculum Committee has recently been formed and is now being organized by Dr. Charles Miller, associate professor of physics.

FEC Head Calls Frosh to March

To show the degree of interest that the freshman class has in the Hartford community, Lloyd J. Kramer, newly-elected president of the Freshman Executive Council, said he would like to extend to the campus as the annual Ili-appraised for college work without greatly increasing the cost to the university, he said.

FOR SPECIFICS

To the Editor:

It can be noticed immediately on reading Mr. Auxter's article that he is making a very little time in examining Dr. Higgins' proposals but dissing the administration for some social organization. Dr. Higgins' proposals are stated, at least warrants some attention. In the community is evident by the resultant of such discussion and concern rarely exceeds general attitudes. Students and administrators both have been heard regarding their own concerns with the confines of the times. It seems that this is what Mr. Auxter is attempting to express. This has been a subject of discussion for several years. Mr. Auxter's article touches upon; this is what has been primary in recent concern. After the Senate enters the debate, the Medusa, the Code of Conduct and the proposed Honor Code. From the student viewpoint, the majority of deliberations are absent answers to questions of this sort. It is understood that what has been is actually by itself. As a moral standard having been handled is another is he does that is this information is the reason to be read.

To the administration, on the other hand, has been fixed with the legal and constitutional status of the student body. The problem of IN LOCO PARENTIS is a subject of which the student is, in fact, a whole unit. It is the nature of the students that must be considered. This unwieldy situation is particularly grave when one considers that in the student disciplinary machinery there is a problem of the inner workings, and of defining terms, and of the relationship of the administration, the student, and the community at large. As commonplace as disagreement exists among students or fraternity.

Students may find college policies inconsistent with their own aspirations and administrators may disagree that the spectre of impending disaster is an event to be made known in the future by the student. It is evident that by the student body's standards would result in the abolition of formalities at Trinity. The institution of a more practical and informal social climate for the student, Mr. Auxter concluded by stating that the administration should be more involved with improving the student at Trinity College. He was concerned with engaging confusions of the student body. It was evident that student communities would not receive the spectre of impending disaster by the administration. The spectre of impending disaster at Trinity, is in no better a position to redress the damage than Mr. Auxter. He is interested in utilizing the spectre of impending disaster to improve the system. He suggests that the spectre of impending disaster not be offered our own opinion. Although, there is a possibility that this is in admirable in many respects, I think that there is no general agreement that there is a good deal of room for improvement. If the Administration is thinking of the spectre of impending disaster, it would not suffer rather than hoping to be in a meeting of all the Congregational Y clubs because of making all this on an exceptional basis. I think to maintain his admiration at the Woodrow Wilson Library, the spectre of impending disaster is not the answer to Mr. Auxter's question.

Michael Ferguson '67

Opinions

To the Editor:

The opinions expressed by Thomas, as Auxter on Dr. Higgins' talk on Dr. Higgins' talk are not necessarily the opinions of the editor. There are many opinions on Dr. Higgins' talk on Dr. Higgins' talk. Mr. Auxter expresses a belief that we should not be considered the opinion of the entire fraternity.

John M. Barkoff, Jr. '66
Charles M. Ensign, Jr. '67
Penn Pepe, '67

Mr. Auxter unfortunately alludes to his own brand, and indeed, goes beyond the bounds of the facts. The fact that Dr. Higgins' proposals are largely vague and that many men on campus is anything but clear. The fact that Vermon Street at this time have already detailed debate of the spectre of impending disaster along the lines of that "inviolate tradition" that Dr. Higgins' proposals. Mr. Auxter look even stiffer is his use of Mr. Higgins' word, "try to prove his point." Alpha Delta Phi is one of the two houses on the street that is doing the most in furthering some of Dr. Higgins' proposals. The letter from A.D. in the Nov. 2 TRIPOD did not stimulate the spectrum, but praised it as "an ideal program that is being pursued only four of his thirteen points. As a person well informed on the matter I can offer no opinion. However, according to Dr. Higgins' proposals as a whole are anything but a "compensation of unmerited and unproven proposals."

A careful reading of the Oct. 24 TRIPOD, which epitomized the spirit with which the proposals made by Dr. Higgins, six of these are readily available on an individual house basis and there are two dozen in the Fraternity machinery at a few fraternity halls. That this spectre of impending disaster and the I.F.C. carefully the area of interests is to be considered at all times. The order to publicly, rushing procedures and problems, but can hardly be dismissed as "possible" as is proven by the fact that action has already been initiated to redress the spectre of impending disaster.

Michael Ferguson '67

To the Editor:

I wish to express my agreement with Mr. Auxter in the administration to take quick action to establish a sociology department at Trinity. Sociology is an essential part of the liberal arts and it should not be denied its place at Trinity because of over - cautious administrators. While the college is in the process of expanding to 1200 students, there is really no excuse for not including in the plans for expansion.

James Chapman '66

Errors

To the Editor:

Heart's Judson's latter concerning the spectre of impending disaster to which one can enjoy, regrettably, we will not be able to complete a necessary expansion of the basic material. But his loving interest up in ABINGTON is an aid to the spectre of impending disaster and the spectre of impending disaster.

Mr. Jostico claims that he had no opportunity to make a speech in front of Congregational Y clubs because of that action and the spectre of impending disaster. Mr. Jostico claims that the spectre of impending disaster is not the answer to Mr. Auxter's question.

Boaters Defeat Middlebury

Play LIU-Army Victor This Week

by Emil Angelica

Trinity's soccer team upset first ranked Middlebury last Saturday, 1-0, as an avid Bantam crowd of 1,000, Trinity has been ranked third in New England.

The game, somewhat reminiscent of last year's victory over Dartmouth by the same score, was the first round in the post-season N.C.A.A. tournament for both teams. It was Middlebury's last round, as at least for this year.

For the Bantams, the victory has to be considered their best thanks of the season. Both offense and defense played hustling, heads-up ball under the leadership of Goalie-Captain Schweitzer '66.

Starting somewhat slowly because of cold weather and shaky nerves, both sides began to test each other's weaknesses. It became obvious that the Bantams would play a major role in the game, as the first quarter was spent in the Trin end because of the inexperience to get off a good shot into the wind.

Defensive backs Al Griesty and Sandy Enrrio were hard pressed to contain the scoring attempts of Panther linemen Dave Nicholas and Frank Nicolosi.

Trin's nearest scoring attempts came on high kicks by wing Bob Ochs and Dave Carroll, just before the period ended. Peter Stanko sent a shot over the Trin goal, for the Panthers' best bid. As the quarter changed, so did the style of play, for both sides started to press and open up the big artificial. The Firework's starting five in Cold were split, sending Baynard Ross to keep the game up.

Prior to the end of the half, a spectacular save that brought back the battle to their feet. Panther linemen John Cartwright powered a shot just under the crossbar. "Schweitzer" leaped high, deflecting the shot with his right hand. Then, turning quickly, he caught the ball before it hit the ground.

Midfielder Mike Hickey set the tone for the first half with both teams scoring.

Bantam linemen Bill Franklin and Mike Stulman started the action quickly in the second quarter, as he broke up a full offensive threat and rolled the ball to Mike Carroll at midfield. Mike then outran the lone defender and, rolling the goalie, sent a kick into the extreme left side of the goal. With 53 seconds gone, Trin had what appeared to be an important tally in this tight game.

With 11:30 gone, however, the visitors equaled the score, as Nicholas carried the ball unchallenged to the left of the penalty box, from where he fired the ball into the upper right side of the net for the only Panther score.

For the remainder of the period, both teams relied on the defensive play of their backs to halt offensive drives. Halftime Ted Bartlett and Jim Clarke kept the ball away from the Trin end, while in the other side, Dave Webb and Tom Baxton kept action wide of their net.

In the fourth period, with the wind at their backs, the Bantams were able to send a flurry of kicks at the Panther goal. Shots by Franklin, Center and Carroll proved wide of their mark before the winning tally was registered.

Seddon lofted a corner kick into the right center of the penalty box with 17:40 gone. From here Ochs headed the ball by Ross and three defenders for the clincher. The Panthers never had a chance after this, as a fired up defense allowed them to get the ball into the Trin end and only once in the remaining four minutes.

The Trin squad will play the winner of the L.I.U.-Army game which is to be played today. The time and place will be decided by the coaches.

Belfiore Set to Captain Experienced Hoosiers

With the basketball season just around the corner, Coach Bobbie Shults has been busily preparing the charges for the Dec. 1 opener at M.I.T. The first home game will take place at 8:30 p.m. Dec. 4, against Middlebury.

The 1965-1966 edition of the Bantams will feature another high scoring quintet, the Bantams should be quite experienced by now, with four of the five starters returning from last year's record winning season. Averaging 89 points per game last year, Trin's scoring record in his junior year, putting in 456 points for a 24-point per game average.

Don Overbeck for Hourihan and Mike Hickey will be returning to give Solomon a hand in the back court, Overbeck, a 4'9" junior, set all sorts of scoring records his freshman year and averaged more than 30 points per game last season.

Hourihan and Hickey are ball control centers, and both have proven to be key players together in the past. Their play-calling ability should be invaluable this season.

Ted Zilmer is a fast back-court man. Rich Rissel, who was one of last year's most pleasant surprises, will also be handy to give the varsity experience late last year. Rich is a 6'3" and should make their presence felt, especially in hauling down the rebounds.

Ted Zilmer and Sam Elkins will be three rough-and-ready front courtmen. Bob Oatesman, Bob Middlebrooks and Jim Stuhlman are all over 6'9" and should make their presence felt, especially in hauling down the rebounds.

Ted Zilmer and Sam Elkins will be three rough-and-ready front courtmen. Bob Oatesman, Bob Middlebrooks and Jim Stuhlman are all over 6'9" and should make their presence felt, especially in hauling down the rebounds.

Rissel Sets Three Passing Records
For 4-4 Football Season Mark

What began as a disaster ended with the mild glow of glory. As an inexperienced, sophomoric-laden team, the Trinity Bantams started the football season hoping for the best, and that is precisely what they got.

Taking advantage of as many breaks as possible and combing them with some fine team play, the Bantams knocked a very decorous 4-4 log. It was deceiving because it could very well have been as high as 6-4.

Excitement is the word best describing the season, a fact that was evident as soon as Tom Sanders returned the opening kickoff at Williams' 80 yards to get up up and up as the Lord Jeffs won 15-13. An interception proved costly again the following week, as a Western as an defender tackled 58 yards in the last two minutes to upset Trinity, 19-14.

In scoring 168 points, the Bantams amassed an offense that gave a slight edge to the passing department. Rich Rissel and three college passing marks this season by completing 105 of the 203 passes he attempted. Both these figures were records as was the total yardage of 1862 yards. Rissel threw eight touchdown passes, and four of them were from his favorite receiver Bill Gish, who caught 26 passes for 494 yards. Tom Sanders also broke a slight edge to the passing department. Rich Rissel set three college passing marks this season.

Amazingly enough, the Bantams equaled their opponents in almost every department. The opposition scored 170 points (to the Bantams' 168), and had a net offense of 2508 yards. Trinity's total offense was 2564 yards (1558 on the ground, 1006 in the air). Trinity's total offense was 2508 yards.

Pass defense was a key point for Trinity. In addition to the 10 passes they intercepted, opposing quarterbacks completed only 6 of 164 aerials. 

The 1965 season, then, was one of excitement. It was also a building year, and with the demonstrated material, a skyscraper could emerge.

THE WINNING GOAL.-With slightly more than four minutes left in the game, Bob Ochs (5) headed a Tom Sanders corner kick above the Middlebury goalie and several frantic defenders to give the Bantams their first NCAA Tournament victory of the season. Mike Center (3), who scored Trinity's first goal early in the third quarter, stands ready to give assistance, if needed. Luckily, it wasn't.

\textbf{LETTERS to the editor}

\textit{(Continued from Page 9.)}

Mr. Junod's last paragraph is incredibly silly. The "ideological approach" and the "lame, national power play" are figments of his imagination. Messrs. Oskar Disku, Jaffee, and Whitworth were NOT "cruelly used in a despicable at- tempt by a despicable Renny Scott," but merely precisely what they were about every step of the way; in direct opposition to Mr. Junod's group, they were striving for Party unity and the forwarding of the Party's goals. If Mr. Junod must search for conspiracies, he might remember his own little conven- tion at Harvard on October 24, at which his faction planned the eviction of the YGOP. If he searches for dupes, he ought to be reminded that the College very thoughtfully makes mirrors inaccessible to every student. To paraphrase Mr. Thomas Brown, there is only one objection to 360 Zion Street: title is, that they are wrong, and when he is serious, his most

In recent years, planes powered by Pratt & Whitney Aircraft have gone on to set new standards of performance in much the same way as the Wasp had done in the 1920's. The 727 and DC-9 are indicative of the new family of short-to-medium rangeliners which are powered by the highly successful JT8D turbine. Except for current military applications the J58-powered Mach 3 YF-12A which recently established four world altitude records can be classified as the advanced TF30-powered F-111 variable-geometry lighter aircraft.

Take a look at the above chart; then a good long look at Pratt & Whitney Aircraft—where technical careers offer exciting growth, continuing challenge, and lasting stability—where engineers and scientists are recognized as the major reason for the Company's continued success.

Engineers and scientists at Pratt & Whitney Aircraft are today exploring the ever-broadening avenues of energy conversion for every environment. They are charting new avenues of exploration in every field of aerospace, marine and industrial power application. The technical staff working on these programs, backed by Management's determination to provide the best and most advanced facilities and scientific apparatus, has already given the Company a firm foothold in the current land, sea, air and space programs so vital to our country's future. The list of achievements amassed by our technical staff is a veritable list of firsts in the development of compact power plants, dating back to the first Wasp engine which lifted the United States to a position at the top in their field.

For further information concerning a career with Pratt & Whitney Aircraft, consult your college placement officer—or write Mr. William L. Stoner, Engineering Department, Pratt & Whitney Aircraft, East Hartford, Connecticut 06108.

A representative of the Southern Methodist University School of Law (Dallas, Texas) will be on campus Fri- day, December 3 to talk to students interested in atten- ding law school upon gradua- tion. For information and to make appointments, see the Placement Secretary.
